DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

Reference number 42 is used to designate both an expander body on page 8 and an annular space on page 11.

Appropriate correction is required.

Claim Objections

Claims 1-7, 9-11 and 19 are objected to because of the following informalities:

The recitation "the contact section is in the radially retracted mode" lacks antecedent basis since the contact section having a retracted and expanded configuration has not been set forth. Claims 2-7, 9-11 and 19 depend from claim 1 and are likewise objected to. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5, 6, 9, 10, 11 and 19 (as best understood by the Examiner) are rejected under 35 U.S.C. 102(e) as being anticipated by Baugh et al., U.S. 7,128,146.

Baugh et al. discloses a downhole expander (A) moveable between a radially retracted mode (54; fig 1) and a radially expanded mode (54; fig 2). Baugh et al. discloses the expander operable to expand a tubular by moving between radial modes (col. 4, lines 64-67; col. 5, lines 16-29). Baugh et al. discloses a contact section (60) arranged to prevent movement of the expander through the tubular (col. 5, lines 18-20). Baugh et al. discloses a tapered and frustoconical expansion surface (54) including a plurality of integral, axially extending body segments (40, 42, 56, 58) and slots (92). Baugh et al. discloses

Allowable Subject Matter

Claims 2-4 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten to overcome the objection set forth above and in independent form including all of the limitations of the base claim and any intervening claims.

Claims 8, 12-18 and 20 are allowed.

Response to Arguments

Applicant's arguments with respect to the amended claims have been considered and are persuasive but moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
